

Info Update: Motion Control Solutions

MACS Control Units: Dynamic CAM profiling included!

The MACS5 motion control unit can position up to three drives or synchronize them with respect to one or more master axes. All functions such as electronic gearing, "flying saw", and even sophisticated CAM profiling are included in the MACS motion control logic.

Typical applications of a modern motion control unit like the MACS5 are the synchronous applying of labels on moving goods, the synchronous feeding and merging of goods, and the cutting of endless goods in a production flow without any stop in between.

zub Products - In the field

Why do many people have strange sensations in their stomachs each time a lift accelerates and decelerates?

The intention of modern lift systems, and a sign of quality, is to move the cabin without any noticeable jerk and without letting the users feel any movement at all.

Career change

Welcome Mr. Renato Bossert to zub AG!

Since June 2013, Mr. Bossert has reinforced our team in the position of Sales Manager. He has extensive knowledge and long-standing experience in project and sales. He coordinates and supports our complex customer inquiries.

For any questions that might arise about our drive technology, Mr. Bossert is your right business partner and he looks forward to providing you with detailed and comprehensive answers. Mr. Bossert replaces Mr. Jürgen Wagenbach, who will leave our company at the end of July 2013.
