

## Info Update: Motion Control Solutions

### MACS5-AMP = 1 Control module, incl. 6 Amplifiers

The MACS5-AMP product line combines a fully featured motion control unit and up to six power amplifiers for brush-type and brushless motors. The very compact module can be used for multi-axis drive positioning, drive synchronization and CAM profiling. License free motion control features, free programmability, different kinds of encoder interfaces, plus modern bus interfaces are the basis for the easy integration of the MACS5 into PLC and PC systems. The very modular and flexible hardware design is the key to adapting the MACS5 even to cost-sensitive, high-volume OEM requirements of small but powerful standalone controls.

### zub Products - In the field

The pharmacist selects the desired medicine on her computer and a kind of magic assistant delivers it directly to the front desk.

Science fiction? No, it is not!

Automated storage systems in use by pharmacies are based on a combination of user-friendly operational concepts, intelligent storage management software, and modern drive and control technology.

### Career change

After more than 11 years of personal and professional engagement for zub AG, Mr. Wagenbach is planning a career change and will leave our company at the end of July 2013.

Mr. Wagenbach was head of sales and marketing and influenced the development of zub AG in a very positive and successful way. His expertise in motion control topics and his strong focus on customers' requirements was an important base to gain long-term partnerships and a high level of customer loyalty.

We want to say thanks for his effort and we wish him all the best.
