

maxon motor acquires zub machine control AG

Looking forward to a shared future with the drive specialist maxon motor

zub machine control AG has become part of the maxon motor Group, effective immediately. maxon is expanding its product portfolio to include intelligent multi-axis controllers, thereby taking a further step toward becoming a one-stop system provider. With our products and 30 years of experience in motion control and multi-axis controllers for industry automation, we will enrich maxon motor's portfolio in the area of complete system solutions. maxon controllers are perfectly complemented by zub's master controller solutions. As a result, maxon is better placed than ever to offer complete solutions, including power supply (batteries, battery management) from a single source.

maxon motor is already working on various system integration projects in the fields of electromobility and robotics, for example. The first product from this business area is the maxon BIKEDRIVE, an e-bike solution for pedelecs and s-pedelecs consisting of a rear motor, battery, and the Powergrip (controller).

Our zub customers will also benefit

"We are *delighted that zub machine control is joining the maxon Group,*" commented Eugen Elmiger, CEO of maxon motor. Both companies will gain from this move. zub now has a powerful partner behind it. Our customers will benefit from one-stop system solutions, plus the maxon motor Group's worldwide sales network. In turn, maxon motor is expanding its range of products and its expertise.

The development of the all-inclusive motion control solutions and the business operations will be synchronized with the specialists at maxon and zub machine control.

Dieter Bieler, the company's previous general manager, will remain at zub in an advisory role and incorporate actively his experiences and know-how as product manager Motion Control.

Welcome to zub machine control AG

*Dr. Uwe Oeftiger is the new CEO
of zub AG*

Executive/CEO

The executive management of zub will be entrusted to Dr. Uwe Oeftiger, who already heads maxon's advanced robotics & systems business unit.

You may contact Mr. Oeftiger by phone +41 41 54150-55
and by e-mail: uo@zub.ch
