## MasterMACS communicates with your devices!

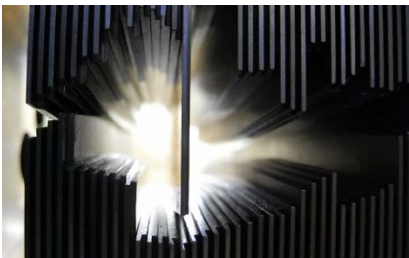

With its latest product of the MACS5 control system generation zub AG has set the course for "Industry 4.0". The variety of interfaces, including fieldbus variants and the integrated multi-axis network controller, provides the necessary basis.

First customers use the device successfully as a data collector and as an internal communication tool. Our next practical seminar will show you how to use the MasterMACS as a data logger and to analyze the collected data.

More about MasterMACS: [Well-equipped for «Industrie 4.0»](#) and [Data sheet](#).

## Irradiate tumors with pinpoint accuracy

To destroy tumor cells, physicians must carry out as high a dose of radiation as possible without destroying the surrounding healthy tissue.

Radiation therapy precisely aimed at the particular tumor has been made possible by a new generation of multi-leaf collimators from the German Cancer Research Center (DKFZ). Moved by precision drives from zub machine control AG. Read the journal article, published online in [all-electronics.de](#) and in "Application against Cancer" (German) in [SPS online](#).

## Anniversary at zub AG

Mr. Kamber supports as an application engineer our clients from the preliminary studies of their particular projects through the initial startup on site.

"Our customers very much appreciate the close cooperation with zub engineers. Solid expertise, many years of application experience and the joy in tackling tricky challenges form the basis of our solution-oriented thinking," says the Managing Director of zub AG, Dieter Bieler. "Long-term employees are the cornerstone of our business model. We therefore congratulate Mr. Matthias Kamber on his 10th anniversary here and thank him for his reliable work and his loyalty to the firm."
