

Info Update: Motion Control Solutions

Everything included: Control unit, amplifiers, bus interfaces

Is your application range ...

- automation of adjustable mechanical stops,
- work piece and tool positioning,
- accurate control of axes in small handling devices,
- standalone control of devices and machines,
- speed and flow control of small pump systems?

Are you looking for ...

- multi-axis solution with integrated power amplifiers,
- standalone control unit,
- configurable unit for brush-type and brushless motors,
- prices with no hidden additional costs?

USB-MINI-COUNT: Encoder interface for up to three SinCos / incremental encoder

The USB MINI-COUNT is the appealingly simple solution that is especially designed for the recording of encoder signals.

Incremental encoders and Heidenhain glass scales can be connected for position recording. The facility for the parallel evaluation of several transmitter systems allows high-precision positioning in the micrometre range.
